1.0 System Overview

The Global Command and Control System (GCCS) Common Operating Environment (COE) Patch (GCOEPTC), Version 1.0 upgrades the existing software to include the items listed in 2.2 Software Changes. The GCCS COE Patch (GCOEPTC), Version 1.0 was developed to run with Unified Build Version 3.0.1.6G, in the Global Command and Control System (GCCS).

2.0 Version Description

The following subsections describe GCCS COE Patch, Version 1.0:

2.1 Inventory of Materials Released

The following physical media and associated documentation make up GCCS COE Patch, Version 1.0:

- GCCS COE Patch, Version 1.0 segment tape.
- *Version Description Document for GCCS COE Patch (GCOEPTC), Version 1.0 for the Global Command and Control System, Version 2.2.*

2.2 Software Changes

The following changes were made in GCCS COE Patch, Version 1.0:

- Modified UB shutdown procedures to make use of the modified COEExecMgr (delivered with HP™ OS Patch 2.0 or Solaris™ Kernel Patch 2.0). Both the OS/Kernel patch and this GCCS COE Patch should be loaded on a GCCS 2.2 system.
- Removed much needless complexity from the GCCSMain script, removing potential for meaningless dead process warning messages at session logout time. Also added functionality to activate COEExecMgr corrections (already included in an OS/Kernel patch).
- In accordance with the Trusted Facilities Manual, removed the “xhost +” entry from the .xsession.GCCS script in the GCCS Account Group.
- HP ONLY: Corrected a problem with the version file of the GCCS Account Group that was causing the “GCCS REV 2.2” version number to appear incorrectly during a user session. Note: This correction was pulled from UBPATCH Version 3.0.1.6GP3 and placed in this GCCS COE Patch.

3.0 Installation Instructions

The GCCS COE Patch, Version 1.0 is in standard GCCS segment format. For instructions on installing GCCS segments, see *the Unified Build 3.0.1.6G System Administrator's Guide*, Segment Installer.
